Agenda

- What is Benchmark? Why Benchmark?
- Serverless Benchmark Setup
- Function Sizes
- Cold Start Results
- Performance Results
- Cost Results
- Q&A

What is Benchmark ?

Benchmarking is the practice of comparing business processes and performance metrics to industry bests and best practices from other companies.*

Why benchmark?

We need to understand and see how our system, programming language or implementations are behaving under certain circumstances.

What will we benchmark?

- .NET versions.
- Environments.
- Implementations

Serverless Benchmark

Setup

Functions Sizes

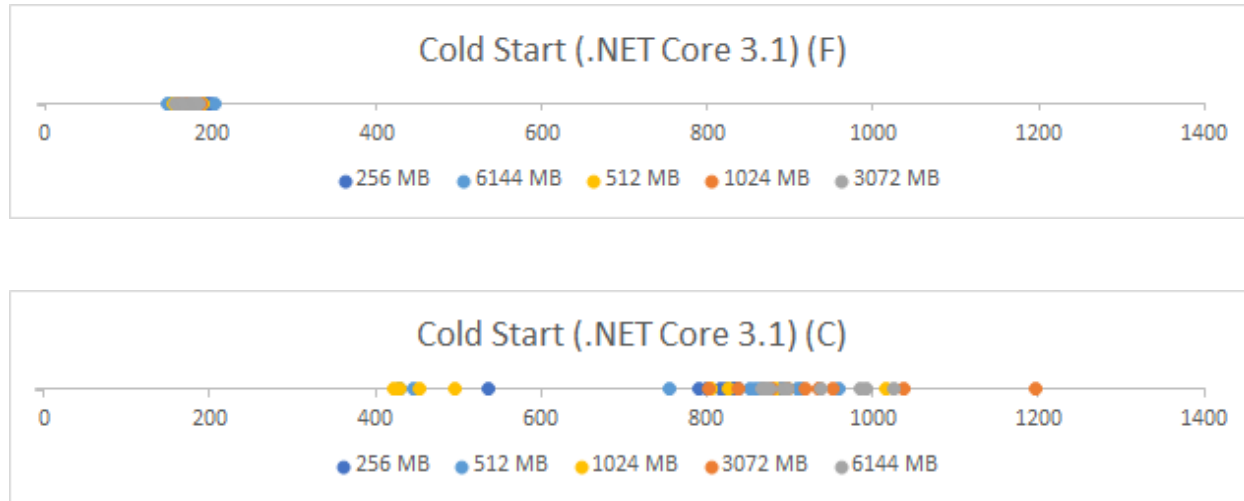

Functions Sizes

1	Framework	Container Size	Function Size
2	.NET Core 2.1	360.63 MB	231.7 kB
3	.NET Core 3.1	205.26 MB	41.8 kB
4	.NET 5	144.80 MB	-

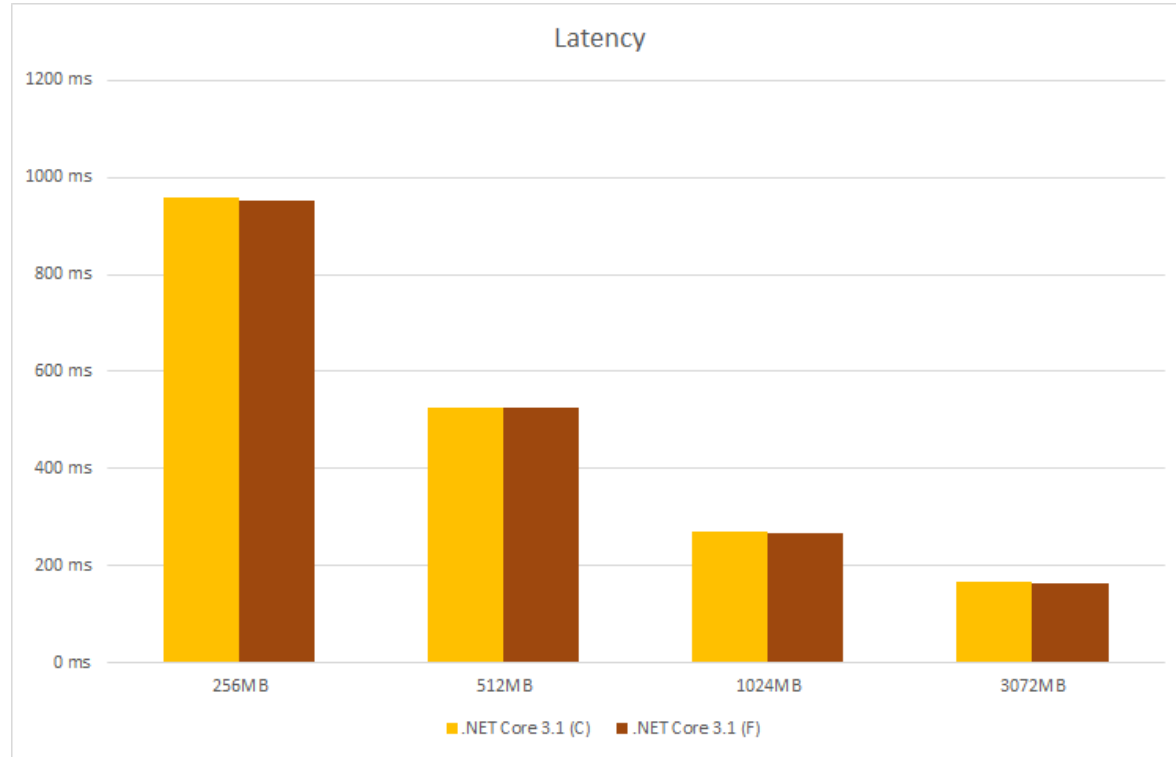

What is Cold Start?

From when an event happens to start up a function until that function completes responding to the event. So more precisely, a cold start is an **increase in latency** for Functions which haven't been called recently.*

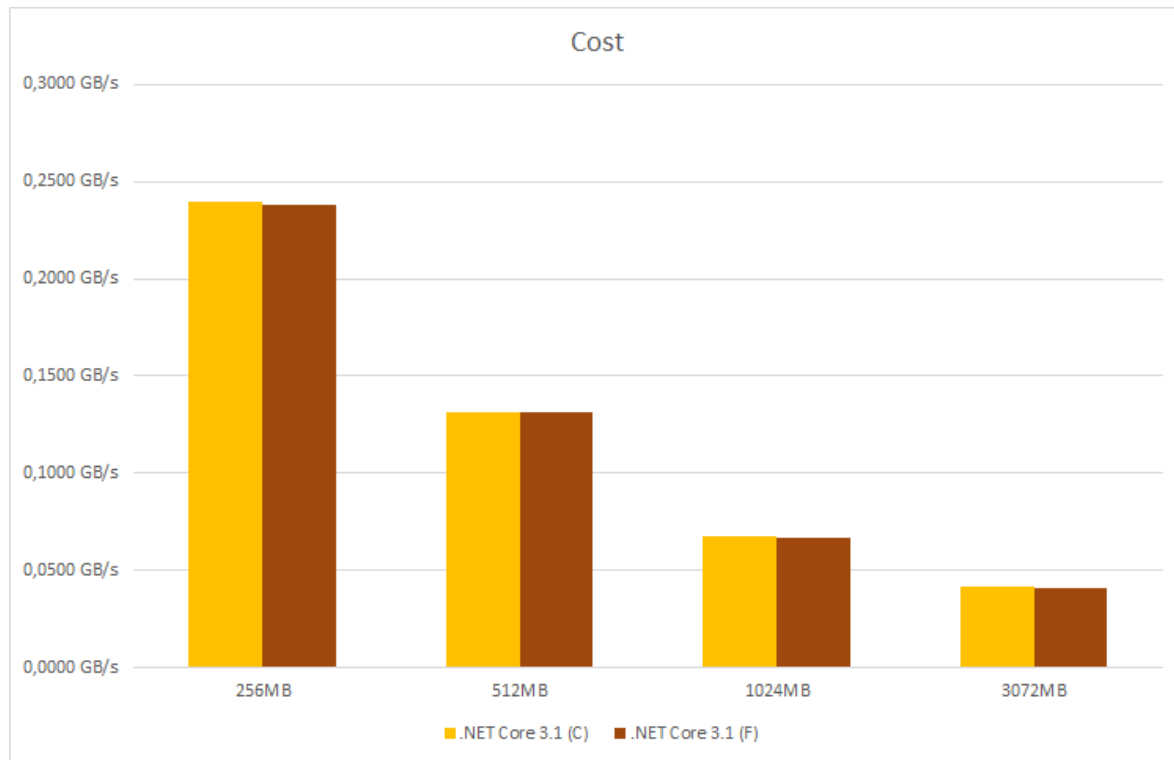

Cold Start (Zip vs Container)

Performance (Zip vs Container)

Cost (Zip vs Container)

Cold Start (.NET Core 3.1 vs .NET 5)

Performance (.NET Core 3.1 vs .NET 5)

Cost (.NET Core 3.1 vs .NET 5)

Demo

Q & A

Thank you for listening.
